INTRODUCTION

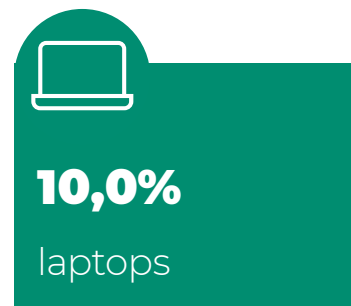

After almost 20 years' work and due to regulatory changes, including Law 7/2022, of 8 April, on waste and contaminated soils for a circular economy, and the transformation taking place in the business world regarding Sustainability and the Circular Economy, **ECOLEC Waste Hub** has been launched. It is an entity responsible for providing environmental services in the field of extended producer responsibility for different waste streams, whose mission is to ensure producers efficiently fulfil their obligations while ensuring full traceability and waste control.

ECOLEC Waste Hub in Facts

ESA Market Share 2022:

Market Share Batteries, Accumulators
and Batteries 2022:

Quantities of WEEE managed 2022:

110.727.330 kg

domestic

7.651.624 kg

professional

WBA quantities managed 2022:

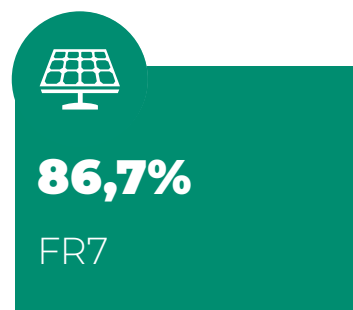

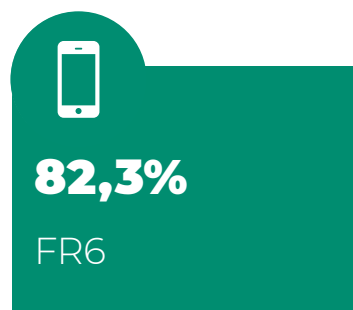

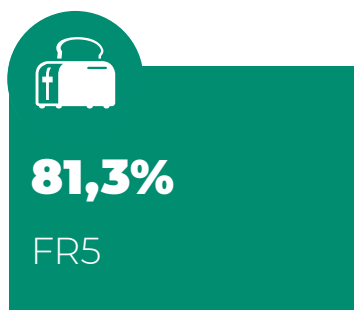

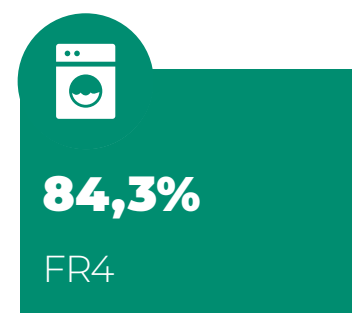

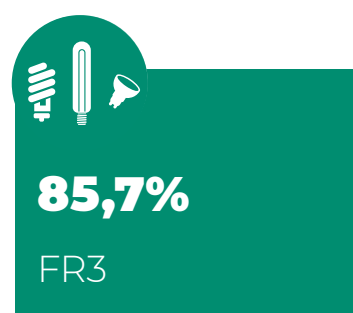

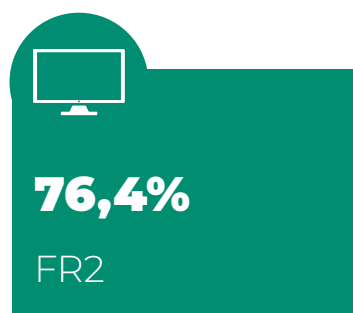

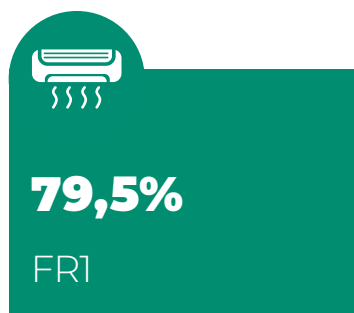

524.628 kg

FR

WEEE recycling and recovery percentages:

facilities

WHO WE ARE

Organisation Chart and Team

ECOLEC Waste Hub is currently owned by ECOLEC Foundation and ECOLEC Batteries, non-profit organisations which are authorised to operate collective systems of extended producer responsibility for electrical and electronic equipment and batteries, respectively.

ECOLEC Waste Hub has five functional areas:

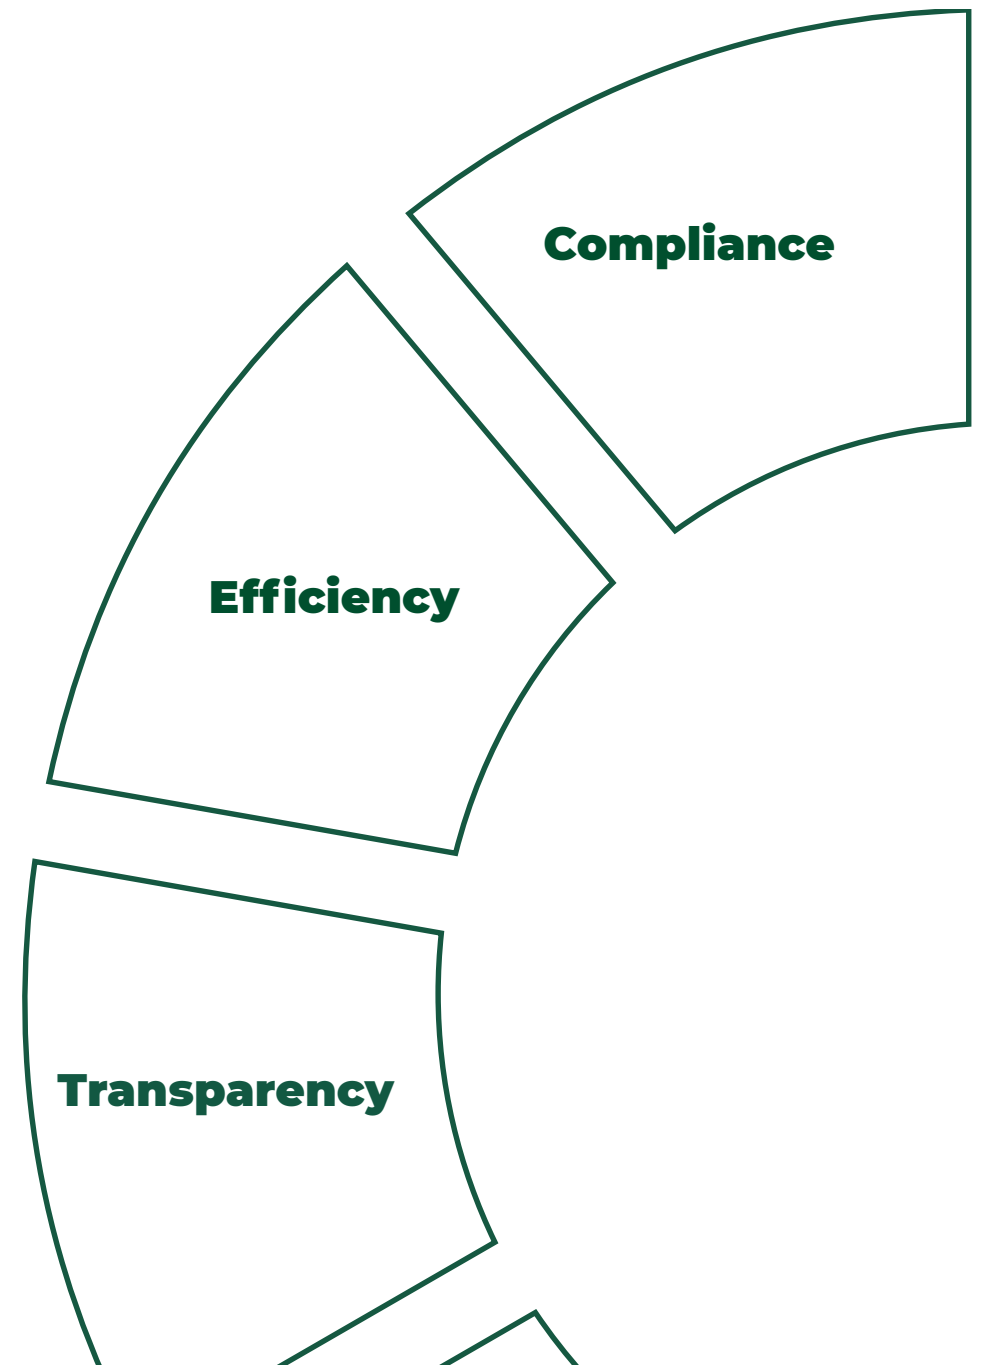

Values

ECOLEC Waste Hub is governed by compliance, efficiency and transparency. Compliance with current environmental regulations.

Efficiency in management processes and associated costs.

Transparency towards all our stakeholders, producers, distributors, the authorities and society, with respect to our work.

Organisations in which it participates:

WEEElogic
European Solutions for WEEE Compliance

Certifications

ECOLEC Foundation has ISO 9001:2015 Quality and ISO 14001:2015 Environmental certifications.

WHAT WE DO

We make it easier for companies producing electrical and electronic equipment and batteries to fulfil their extended producer responsibility obligations.

Services:

- Advice and support in the registration process and periodic declarations in the special sections of the Register of Industrial Establishments and in the Register of Product Producers.
- Separate waste collection at the premises of manufacturers and producers linked to collective extended producer responsibility schemes according to environmental legislation.
- Assistance in the preparation of Waste Prevention and Minimisation Plans within our field of work.
- Development of CSR actions linked to care for the environment.

HOW WE DO IT

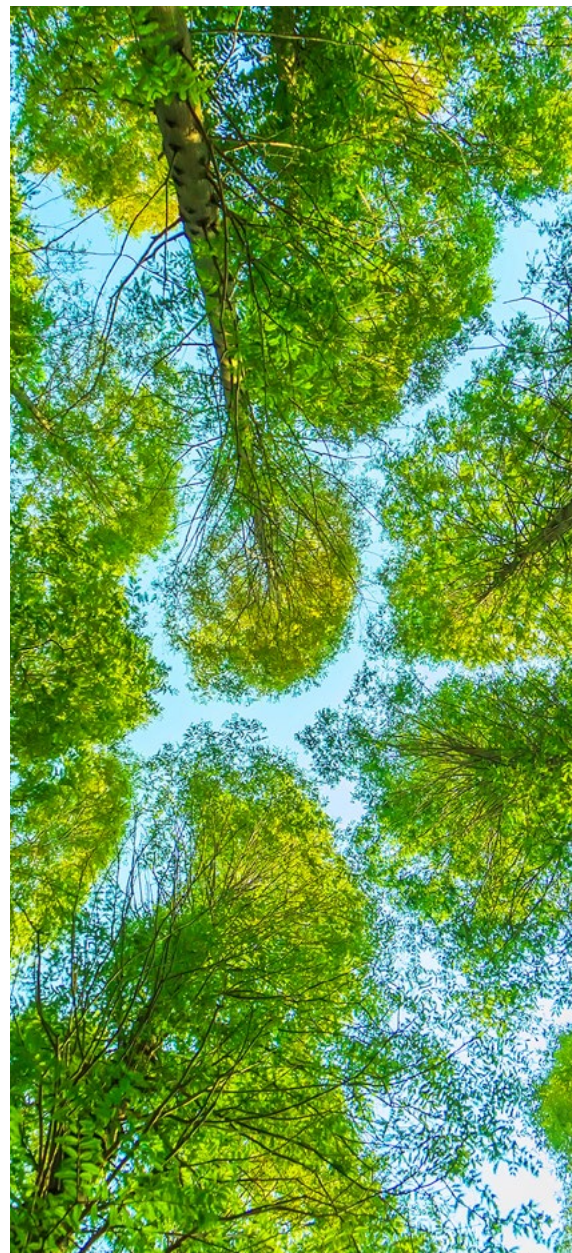

Operating model

Waste is managed by waste managers authorised to perform the various collection and transport, storage and recycling and recovery operations, managers who are selected through selection processes according to criteria of publicity, competition and equality, seeking the best service and the greatest efficiency.

Traceability

We guarantee the traceability of the waste managed through the WEEE TRACKER® system, which ensures the control of the waste from the generation points to the final management facilities.

Through our ECOAPP management IT platform, we centralise all the operational information about the various waste flows, providing the different agents that collaborate with the collective systems of extended producer responsibility operated by ECOLEC Waste Hub with comprehensive information about the waste managed broken down by origin, waste fraction, etc.

Communication

We are always cognisance of the importance of communication and dialogue with the various agents with whom we interact: manufacturers, distributors, the authorities, public institutions and society in general. We implement our communication strategy with tactical actions aimed at each agent, such as #GreenMark, #GreenShop and #GreenWeek. To find out more about our actions, click [here](#).
